

PENIEX

Strong specialization in crypto-currency,
financial exchange

Peniex is provide mechanism and flow for the user to deposit the coins
and advertise to buy or sell on our platform. If the order matches, the
buy side will do the direct bank transfer to the seller and the seller will
confirm the transaction and the crypto currency will be transferred to
the other client on-chains.

Ticket Problem Trade

All the users are protected, in case of problem, users can lock
their coin and our support team will resolve based on
evidences provided by both sides 24/7

Two Factor Authenticator

Peniex is using a Two Factor Authenticator process to help to
lower the number of cases of identity thief, users can enable
2FA for withdraw and coin trading.

Real-time Chart

Peniex provides a real time price chart for every 5 minutes
updating with data from various trading platform such as
Coinbase, Binance,...

Achievements:

In this project, we developed the understanding of the requirements for fintech solution:

- KYC process for the users to use the platform
- Dispute resolution mechanism for financial transaction
- Tight transactional control
- Security (firewalls between system components, 2-factor authentication)
- Due to the transaction flow, we need to facilitate real-time interaction.
- Therefore, the system need to be well-designed to handle high traffic

Technology
